DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of claims 1-5 in the reply filed on 11/3/05 is acknowledged.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Boerstler et al. (US 2005/0088794).

Boerstler et al., fig. 5 discloses the claimed semiconductor integrated circuit including an internal circuit having first and second I/O external terminals 501, first and second fuse elements 504, each having first and second terminals, the first terminals of the first and second fuse elements being respectively connected to the first and second external terminals 501, and discharge line 508 or 511 connected to the second terminals of the first and second fuse elements and serving as an electrostatic discharge current path.

With respect to claim 5, see paragraph [0001].

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boerstler et al..

Boerstler et al. in disclosing the claimed semiconductor integrated circuit as explained above fails to teach the resistance value, maximum energy level or breakdown current of the first and second fuses before they break to protect the circuit. However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have used the basic formula to figure out the minimum resistance value, energy or current so that it would break at the voltage below the breakdown voltage of the device that is protected.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Jeffries et al., Toyoshima, Marr, Matsumoto, and Kameda et al. teach the use of fuse in ESD circuit.
